**Subject:** FW: FR for Class V DB Wells

I spoke directly with John today and he confirmed PT only needs our initial authorization to construct the Class V well for the Burdock Unit and will only secure initial FR for this well. The second disposal well servicing their satellite facility at the Dewey Unit will not be needed until some time later.

Let me know the scope of changes, etc. needed to change the permit and Fact Sheet language to capture this change.

Valois: John also let me know he had talked to you about the number of Class III wells estimated to bring their first wellfield on line to inform their initial FR coverage?

Thanks,

Douglas

**Subject:** FR for Class V DB Wells

Hi Chuck: John Mays left me a voicemail stating that he is working on securing FR for only one of the two deep disposal wells and that PT does not plan to build and operate a second well until some time after the first wellfield begins to operate. I have only been able to leave him a voicemail in response, but I let him know that we would likely need to reduce the number of wells authorized to construct in the draft Class V permit from two to one.

Hopefully, by the time you return we would have confirmed the above, identified which of the two wells PT intends to use first, and can discuss how best to make appropriate changes to the draft permit and Fact Sheet.

Thanks,
